

SECURE YOUR BUSINESS & PROPERTY

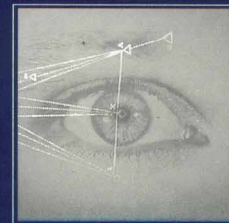

the needs

Security, protection and peace of mind have always been mankind's most pressing needs. These needs have assumed even greater importance in today's world as we face the increasingly complexities and uncertainties of life.

Protecting business and property is a Full - time job. It demands a never ending watch for any abnormality that could potentially cause devastating damage to your life and business operations - whether through illegal break-in, theft, robbery, fraud, fire, or gas leak.

the solution...

We do more
Than just providing security systems and equipment.
We are offering
A TOTAL SECURITY SOLUTION

Vision

Sekurindo endeavors to be in the mind of the people who think of security, and to be recognized as the leader in the security industry that contributes to the world community's peace of mind.

Mission

To deliver security products and professional services of the highest quality standard. We are committed to exceed our clients' expectation at every opportunity and are dedicated to protect our clients' assets, personnel and reputation.

SEKURINDO IS IN ALLIANCE WITH **SECOM** Co., LTD. A SECURITY SERVICE LEADER IN JAPAN,
AND ALSO REPRESENT THE MOST IMPORTANT SECURITY MANUFACTURERS FROM AROUND THE WORLD.

Goal

To help clients develop a sound, integrated and economical solution to their security needs. Simultaneously, to reduce personal risk and corporate liability with minimum impact on privacy and freedom of operation.

Values

- We deal with stakeholders with HONESTY, INTEGRITY, RESPECT, FAIRNESS and ETHICS.
- We RECOGNIZE and ACKNOWLEDGE EFFORTS that contribute to the success of our organization.
- We are ONE TEAM; we seek solutions through DIALOGUE and WORKING TOGETHER to achieve our goals.
- We encourage LEARNING and INNOVATION that result in better service to our clients.
- We pride in taking OWNERSHIP of our work and RESPONSIBILITY for our actions and decisions.

Motto

" To Protect and To Serve "

We will find your VULNERABILITY and ELIMINATE them. We'll train you and your employees in security plan we'll devise after careful analysis of your exposure and needs.

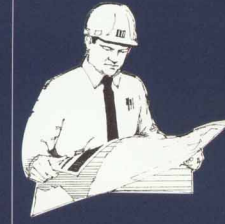

SITE SECURITY ANALYSIS 1

SEKURINDO offers no cost security consultation service directed toward the identification of your needs and requirements. We will have a thorough and complete review of the site location determining appropriate system design. We will then develop specific product applications to provide a meaningful and cost effective security solutions for the present, with provision for future growth and expansion.

ENGINEERING DOCUMENTS 3

SEKURINDO engineers will develop CAD drawings consisting of point to point drawings, riser drawing, and typical wiring diagrams for all equipment to be provided as permanent record of what was done allowing for follow-up system analysis and maintenance.

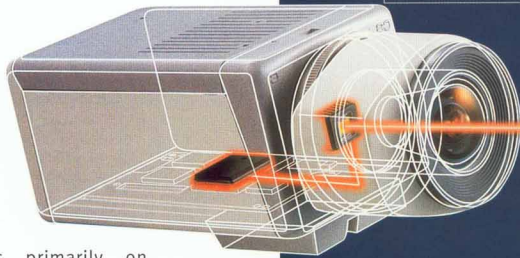

PROPOSAL PRESENTATION 2

SEKURINDO security-system products and services are presented and thoroughly reviewed in an effort to establish clients understanding of the scope of work, security, as well as approval on cost feasibility.

f o c u s

service outlines

PROGRAMS WILL BE CREATED WITHIN OUR RESOURCE TO OUR VALUED CLIENTS IN OUTLINED STEPS :

SEKURINDO focuses primarily on centralized security systems integration and provides a broad spectrum of systems and services tailor made for commercial and industrial market. SEKURINDO has the most suitable systems and services to provide reliable security control protecting individual, asset, property and valuable information. A total security protection, economical solution, convenience and peace of mind are the main factors of our Security Systems' design considerations.

PROJECT MANAGEMENT 4

Project schedules are developed; Installation is undertaken on a consistent basis to ensure system integrity in a timely and consistent manner.

SUPPORT SERVICES 5

On completion of the Installation parameters, SEKURINDO will do a site walk-through and detailed check of ALL of the system components, connections, and wiring to ensure system integrity is in tact. In conjunction, a free system training is offered and provided both on site, as well as site where applicable, to ensure that a thorough understanding of the system capabilities is achievable. We do not limit the level or degree of training provided in an effort to ensure administrative functionality.

COMPLETE MAINTENANCE 6

SEKURINDO also offers a complete maintenance service design to meet the clients' needs, expectations, and budget. These offerings will vary in diversity and complexity based on project.

WE WILL HELP YOU CHOOSE SECURITY CONTROLS THAN GROW WITH YOU, WE TAKE PRIDE IN ESTABLISHING COST-EFFECTIVE SOLUTIONS FOR ALL LEVELS OF PROTECTION.

SECURITY SYSTEMS INTEGRATION

SURVEILLANCE SYSTEMS

Monitor your business activities in any location, at any time, from any where. Surveillance systems also provide the psychological effect to prevent a person from attempting wrong doings. Furthermore, the recording image can also be used as an evidence for initial security inspection.

GUARD TOUR SYSTEMS

Monitor timetables and patrolling activities of your Security Guard 24 hours a day. Keeping track will become an easy task to help management ensure a dedicated and discipline personnel.

ACCESS CONTROL

Control traffic to eliminate any concerns of thefts and ill intentions being carried out by unauthorized persons entering the room. In case of any incident did occur, our client can easily trace and pinpoint the time and the last person accessing the room. Access control can also be used as Time Attendance to monitor absentees to uphold personal discipline.

DETECTION SYSTEMS

There are various Detection Systems available to protect life, assets and property, such as Early Smoke Detector, Metal Detector (handheld, walkthrough and X-ray) and Explosive & Drug Detector.

ALARM SYSTEMS

Protecting your assets and properties of your business after office hours or in unattended premises. Prevent illegal break-in, fire or gas leak that could cause devastating damage to your business and operation. Panic Button is installed to subdue potential hold-up during office hours.

YOUR BUSINESS & PROPERTY

DOOR EXIT CONTROL

Ensure the Emergency Exit Door is used only during emergency situation. Door Exit Control will announce the unauthorized use of a door with high decibel alarm sound. A special key allows authorized personnel to use the door freely.

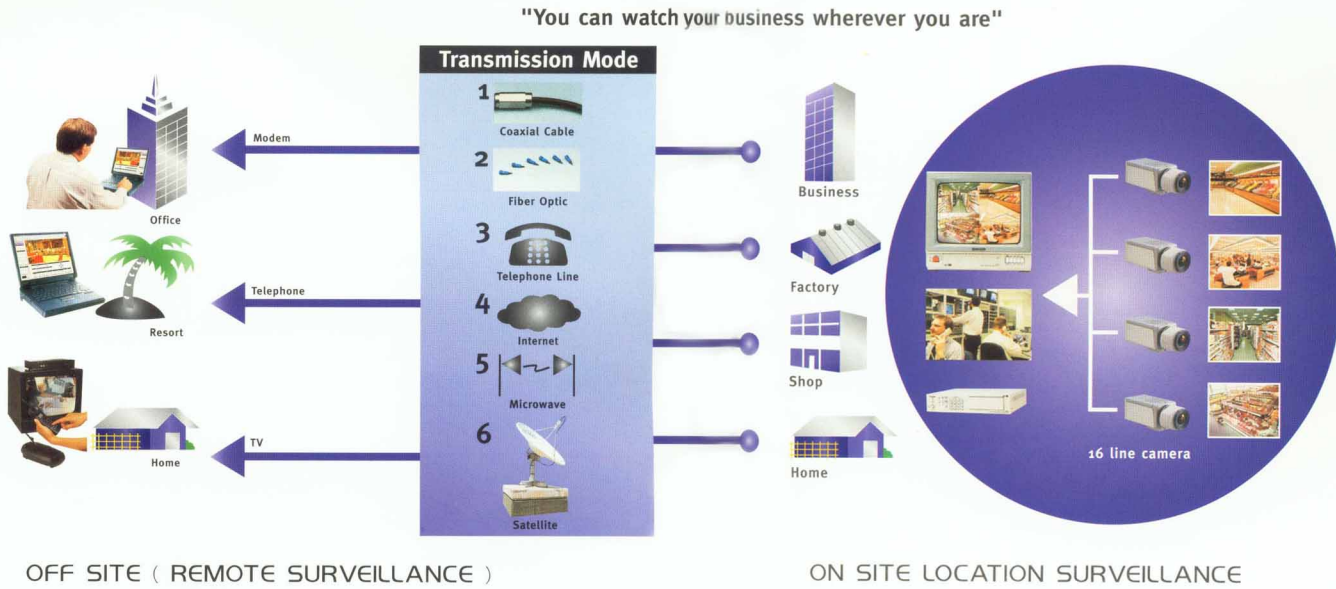

OTHER SYSTEMS

Such as key Management System, Barrier Gate, Bullet Proof Glass.

SURVEILLANCE SYSTEMS (CCTV)

By carrying strong brands from all around the world such as Panasonic - Japan, Kalatel - USA, Dedicated Micros - UK, AVE - USA, Chugai - Japan and Adpro - Australia, we are able to virtually serve our clients' needs. Today's state-of-the-art technology allows remote surveillance to be done through several method of transmission mode such as coaxial cable, fiber optic, telephone line, internet/network, satellite or RF/microwave.

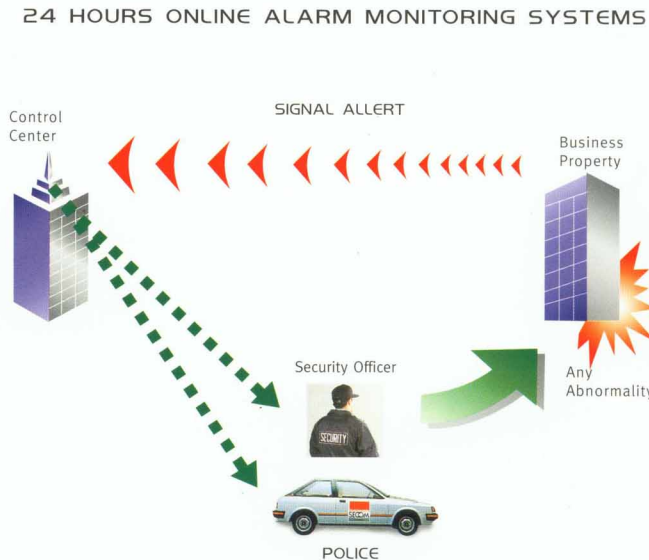

Specific Application For Banking ATM interface

We also provide specific application for banking like ATM (Automatic Teller Machine) interface, which allows the data transaction to be inserted to the video image. This equipped Bank Personnel to easily identify whom, when and what transaction has been made in response to clients' complaint or fraud.

ALARM SYSTEMS

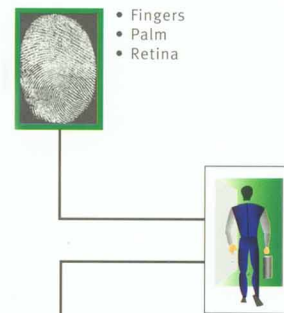

Conventional alarm system are sometimes inadequate since in most cases there is no security staff on hand at night to respond to any abnormal signal. But with our online security system, if a sensor is triggered, a signal is automatically sent to our Control Center through the telephone line and a professional security officer is dispatched to the scene immediately to investigate and response to any emergency situations. When required, we will contact the police to come to the scene. In this case, response is FAST, SURE, and DEPENDABLE.

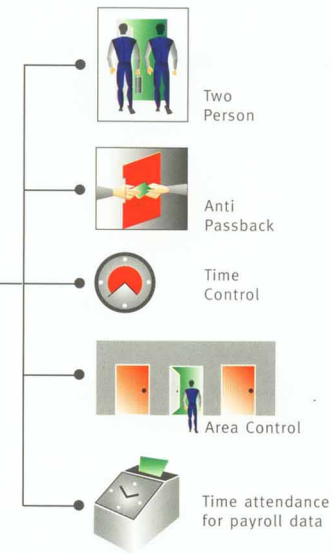

ACCESS CONTROL

Biometrics

- Fingers
- Palm
- Retina

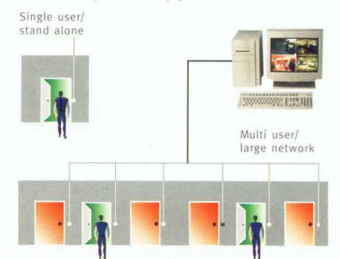

- Card**
- Smart card
 - Proximity
 - Magstripe
 - Wiegand
 - Barcode

Access Control systems ranging from affordable standalone Pin or Card Reader to a large network based Access Control where 40,000 Readers are capable to be installed in one network system. We distribute HID Readers, the largest Reader manufacture in the world and PCSC Control Panel from USA. Additionally, we also carry various brands from reputable manufactures.

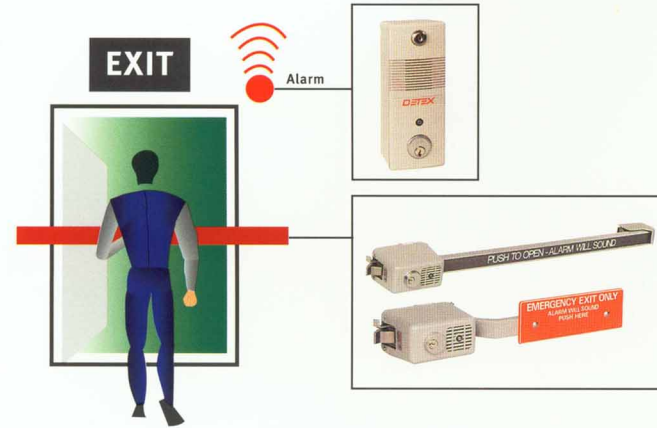

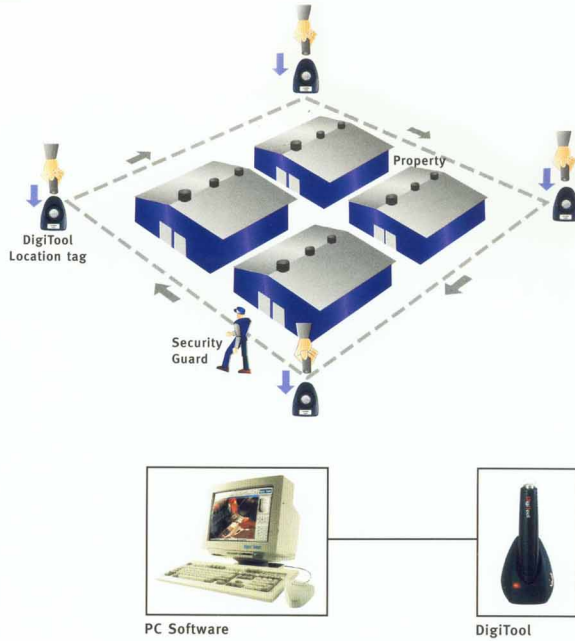

System Application

DigiTool is designed to be tough and rugged, as it will be carried from location to location by the Security Guard while conducting an internal and/or external patrol of the facility. The Security Guard is issued with a list of pre-arranged locations, which can be printed out by the PC software.

Other application :

- Inventory Auditing and Physical Checks
- Quality Assurance Systems
- Service & Maintenance Control

We offer unequalled economy and reliability. Rugged cast aluminum construction and heavy-duty lock and bolt mechanisms resist tampering. High decibel, solid-state alarms announce intrusions and unauthorized exiting. When it comes to Door Exit Control, we offer the most worry-free, cost-effective units in the industry.

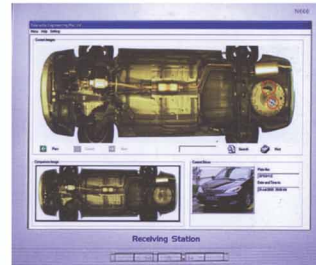

GATE & DETECTION SYSTEMS

Pedestrian Security Gate

Pedestrian Security Gate or some call it Security Entrance Lane is developed to control the high throughput flow of pedestrians entering or exiting restricted areas which is usually under surveillance. The barriers are designed to work in a normally closed mode and retract inside the pedestal after a valid card has been presented to allow the authorised user to pass. The design concept allows a flexible approach to providing effective access control in area where previously security has been desirable but the associated aesthetic implication had been unwelcome or prohibitive.

Under Vehicle Surveillance System

Under Vehicle Surveillance System is a digital surveillance system specially designed for security professional to scrutinize the undercarriage of all vehicles that pass through the security control point. The system scans rapidly and effectively of moving vehicles for a security guard to inspect for illegal attached packages such as dangerous explosive devices, weapon, drugs or contrabands without causing any great disturbance to the traffic flow. This system is to replace the conventional way of using a mirror which is proven to be not effective and labour intensive as a result it is more costly in the long run.

Metal Detector

We carry a complete line of products for security screening: handheld, X-ray scanners and walkthrough metal detectors for buildings, airports and mailrooms. These days security means more than just surveillance equipment to monitor facility. We need to screen visitors to make sure they are not carrying contraband or weapons. And for greater security, we also need to screen incoming packages and mail.

Explosive & Drug Detector

It provides the capabilities to quickly and accurately detect microscopic traces of drugs or explosives on people, packages, hand baggage, hand luggage, vehicles, and to investigate suspected items. After sampling, any response to explosive is displayed within a couple seconds and then quickly resets automatically to allow fast security checking to maximize throughput when necessary.

to protect

Sekurindo provides security and peace of mind to people virtually anywhere in every sector of society. We achieve this through our professional determination and commitment to our security products, services and innovation.

We will maintain a wholly professional attitude toward those we protect and serve, toward other firms in the industry, and toward the members of other professions.

Sekurindo will always be mindful of the trust placed on us by our clients and of our responsibility to render services at the highest level of quality.

We will ensure that all of our employees are professionally trained to clearly understand our company operations, policies and procedures, in addition to their relationship with client companies and employees.

to SERVE
